Deva's Classes — UAT Checklist

Version 2 (credits, online payment, revamped UI). Every feature in the app, grouped by who uses it. Work through it on a phone *and* a laptop, and in both light and dark.

Tester		Date		Build / commit		Device & browser	

Mark P or F. Anything failed, write what you saw — the exact wording on screen is usually the thing that identifies the bug.

0. Before you start

Skipping these makes every later test meaningless — most obviously, booking fails outright until the rules are deployed.

#	What to do	What should happen	P / F	Notes
S01	Deploy the Firestore rules to beta: `npx firebase deploy --only firestore:rules --project beta`	Completes without error. **Until this runs, no student can book at all** — the slot-lock collection is denied by default.		
S02	Run the class-detail migration, dry first: `node scripts/move-class-detail.mjs <key> --dry`, then without --dry	Reports how many classes moved. Existing lesson notes and recordings move off the shared class record. Safe to run twice.		
S03	Have these accounts ready: 1 admin, 1 teacher (Guruji), 1 student in India, 1 student abroad, 1 paused student.	All can sign in except the paused one, which is tested separately below.		
S04	Note that Razorpay is in TEST mode.	Use Razorpay's test card numbers. No real money moves. If live keys are in, stop and check with the office first.		
S05	Open the app on a phone and on a laptop.	Several checks below only fail on one or the other — the attendance dialog and the month strip especially.		

1. Everyone — signing in and access

#	What to do	What should happen	P / F	Notes
A01	Sign in with a correct User ID and password.	Lands on My Classes (student) or Dashboard (Guruji / office). No email is ever asked for.		
A02	Sign in with the right ID and a wrong password.	“Invalid User ID or password.” The same message for both, deliberately — it must not reveal whether an ID exists.		
A03	Sign in with an ID that does not exist.	Exactly the same message as above.		
A04	Type the User ID in CAPITALS.	Still signs in. Case does not matter.		
A05	Close the browser, reopen the app.	Still signed in. No second sign-in.		
A06	As a student, type /admin/students in the address bar.	Refused — sent to the unauthorized page, never the admin screen.		
A07	As Guruji, type /admin/fees in the address bar.	Refused in the same way.		

#	What to do	What should happen	P / F	Notes
A08	Sign in as the paused student.	“Your account is paused” with a Sign out button, and nothing else. No booking, no menu.		
A09	Sign out from the menu.	Back to the login screen. Going Back in the browser does not get into the app.		

2. Everyone — Settings

#	What to do	What should happen	P / F	Notes
B01	Settings > Profile > Edit. Change your name, phone and gender. Save.	Saved and shown immediately, including in the top bar.		
B02	Add a profile photo from the phone's camera roll.	Cropped to a square, appears straight away, and stays after a refresh.		
B03	Remove the photo, with gender set to Female or Male.	Falls back to a simple figure, not a blank circle.		
B04	Remove the photo, with gender set to “Prefer not to say”.	Falls back to your initials on a colour. No gender is ever guessed from a name.		
B05	Look for a way to change your User ID, password, role or fee.	There is none. All four are staff-only or fixed; confirm nothing on this screen edits them.		
B06	Settings > Appearance. Pick Light, then Dark, then Match my phone.	Changes at once. “Match my phone” follows the device's own day/night setting.		
B07	With Dark on, hover over menu items, list rows and the close (X) buttons.	Text stays clearly readable on hover. Nothing goes pale-on-pale. Check the same in Light.		
B08	Set a theme on the phone, then open the app on the laptop.	The laptop keeps its own setting. Appearance is per device, by design.		
B09	Settings > Notifications. Turn them on.	The phone asks permission. After allowing, the card says they are on for this device.		
B10	Set a class reminder: 15 min, then 30, then 1 hr, then a custom value.	Each saves. Custom accepts minutes or hours, and refuses anything over 24 hours.		
B11	Turn the reminder off but leave notifications on.	Reminder off; other notifications still arrive.		
B12	Deny notification permission in the browser, then try again.	Tells you they are blocked in your phone/browser settings — it does not pretend to have worked.		
B13	On an iPhone, open the app in Safari (not added to the home screen) and open Notifications.	Explains that the app must be added to the home screen first. This is Apple's rule, not a bug.		
B14	Settings > Timezone. Type “kolkata”, then “europe”, then “+5:30”.	All three find matches. City, region and offset all search.		
B15	Scroll the timezone list before typing anything.	The studio's usual zones are at the top. Your own device's zone is marked. Every zone shows its offset.		
B16	Pick a zone, Save, then sign out and in again.	Class times are shown in the new zone. The note about re-signing in is accurate.		

#	What to do	What should happen	P / F	Notes
B17	Tap the bell in the top bar.	Lists notifications; a red dot shows when something is unread. Tapping one opens what it is about.		

3. Student — My Classes

#	What to do	What should happen	P / F	Notes
C01	Sign in as a student with no classes at all.	Empty state with a “Book one now” button that works.		
C02	Look at the credit card at the top.	Shows classes held, the pips, and the date to use them by. Nothing says “credits” where it could say classes.		
C03	Hold classes that expire within a week.	The card warns that they are expiring soon.		
C04	Open an upcoming class.	Shows date, time in your timezone, and Request Reschedule plus Cancel Class.		
C05	Check the tag on each class you have.	Scheduled / Awaiting confirmation / Completed / Missed / Cancelled, matching reality.		
C06	Open a class that has already happened and mark it done.	Moves to Completed. Guruji marking it too shows as confirmed by both.		
C07	Try to mark a FUTURE class done.	Not offered. (If it is offered, that is a bug — the database refuses it.)		
C08	On a completed class with a recording, look for the link.	Shown, with the passcode, and a way to open or copy it.		

4. Student — Book a Class

The heart of the app. Test C/D with two browsers side by side where it says so.

#	What to do	What should happen	P / F	Notes
D01	Book a Class. Tap a date in month view.	Opens that day.		
D02	Tap a free slot once, then again.	First tap highlights it (“Tap again to book”); second opens the booking box. One tap alone never books.		
D03	Add a note for Guruji and book.	Books, and the note reaches Guruji on the class.		
D04	Try to tap a red / busy slot.	Cannot be booked. One class per slot, always.		
D05	Try a slot inside a period Guruji has blocked.	Cannot be booked.		
D06	Try a slot earlier today / in the past.	Cannot be booked.		
D07	Try to pick a date more than 7 days ahead.	Refused, with a message explaining students book the week ahead and to ask Guruji for anything further out.		
D08	As a student abroad, book a slot.	An extra confirmation shows the time in BOTH your clock and the studio's before it books.		
D09	As a student with zero classes left, try to book.	Refused, pointing at Fees or the office. No class is created.		

#	What to do	What should happen	P / F	Notes
D10	**Two browsers:** open the same free slot in both, book in A, then book in B.	B is refused with “Someone has already booked this slot”, the calendar refreshes, and **B is not charged a class**. Check B's balance.		
D11	Book, then check the balance.	Exactly one class is used. Not two, not zero.		

5. Student — Fees and buying classes

#	What to do	What should happen	P / F	Notes
E01	Fees. Confirm there is no “Submit payment” button anywhere.	Only “Buy credits”. Submitting a payment was removed.		
E02	Tap Buy credits as a student in INDIA.	Asks how many classes, offering 1, 2 and 3 only.		
E03	Tap Buy credits as a student ABROAD.	Offers 1, 3, 4 and 12. There is no 6.		
E04	Pick a number and read the date shown.	India: 4 weeks out. Abroad: 2 weeks for 1 class, 4 for 3, 5 for 4, 15 for 12. **Always a Sunday.**		
E05	Leave the amount empty and try to pay.	Blocked, asking for the amount.		
E06	Type 0, then a negative, then 999999.	All refused. Allowed range is Rs. 1 to Rs. 200,000.		
E07	Type a sensible amount and pay with a Razorpay TEST card.	Payment sheet opens, completes, and the app says “Payment received — appearing shortly” rather than claiming the classes have arrived.		
E08	Wait a few seconds on the same screen.	The balance updates by itself once the bank confirms. No refresh needed.		
E09	Check the payment row that appears.	Month, classes bought, amount, method and Confirmed.		
E10	Spend one class, then buy again immediately.	Allowed. The limit is on unused classes, not a monthly allowance.		
E11	Fill up to the limit (3 India / 12 abroad) and try to buy more.	Buy button is greyed out, with a message that you are holding as many as you can at once. It is disabled, not hidden.		
E12	Cancel the Razorpay sheet halfway.	Returns to the form cleanly. No payment, no classes, no error shouting at you.		

6. Student — Recordings and Help

#	What to do	What should happen	P / F	Notes
F01	Recordings, with none added yet.	Says so plainly.		
F02	Recordings, after Guruji adds one.	Listed newest first with the link and passcode together, and a copy button.		
F03	Rename a recording.	Renames, and the new name survives a refresh.		
F04	Help. Open every section.	Booking, Credits, Paying, Your account, Recordings and reminders.		
F05	As an INDIA student, read the credits answers.	Says 3 can be held, options 1, 2, 3, and 4 weeks.		

#	What to do	What should happen	P / F	Notes
F06	As an ABROAD student, read the same answers.	Says 12, options 1, 3, 4, 12, and the per-size windows up to 15 weeks.		
F07	Search Help for any mention of extending an expiry.	**There is none.** Extensions are Guruji's to offer, not something a student reads about.		
F08	Read “What amount should I enter?”	Tells them to enter what was agreed, and to ask the office if unsure.		

7. Guruji — teaching

#	What to do	What should happen	P / F	Notes
G01	Dashboard.	Today's classes in order, and anything needing confirmation. View Schedule works.		
G02	Open a class. Mark as Done.	Moves to Completed.		
G03	Open a class nobody attended. Mark as Missed.	Tagged Missed — which is not the same as cancelled — and the class stays in the record.		
G04	On that missed class, decide the credit.	Offered: give it back, or keep it spent. Nothing happens to the class until you choose.		
G05	Add lesson notes to a class.	Saved, and visible to you and the office.		
G06	**Sign in as a DIFFERENT student** and look for that class's notes.	**Not visible.** Lesson notes and recordings are private to that student and staff.		
G07	Add a recording: paste a Zoom link and passcode together.	Saved as one block. The student gets it with a copy button, and is notified once.		
G08	Cancel a class.	Student is told, and the class's credit goes straight back.		
G09	A student asks to reschedule. Confirm it.	Moves to the new time and shows as Scheduled.		
G10	Reject a student's booking request.	Rejected, and the credit returns.		
G11	Students list — search by name, then by country.	Both find the right people. The list is A to Z.		
G12	Open a student's profile. Tap the regular / irregular tag.	**Guruji can now set it too.** Dialog offers Follow their classes / Always regular / Always irregular, and says what the arithmetic currently thinks.		
G13	On a phone, open that same tag dialog.	Opens centred and fully reachable — it must not hang off the edge of the screen.		
G14	Look for Mark Paid, Record Payment or Give credits anywhere in Guruji's screens, including a student's profile.	**There are none.** Deliberate — recording money is the office's job. He can still SEE every payment and total.		

8. Guruji and office — Schedule and time off

#	What to do	What should happen	P / F	Notes
H01	Schedule. Switch between day, week and month.	Classes and blocked time show in all three, in the studio's timezone.		

#	What to do	What should happen	P / F	Notes
H02	Schedule a class into a FREE slot.	Created, and the student is notified.		
H03	Schedule a class into a slot that already has one.	**Refused.** The button stays disabled and says to pick another slot. There is no override — not for Guruji, not for an admin.		
H04	Create a recurring series, weekly, with an end date.	Generates the occurrences (up to 8 weeks).		
H05	Create a recurring series where one date clashes with an existing class.	The clashing date is skipped, the rest are created, and the student's notification says how many were skipped.		
H06	Manage Availability. Block a single day, all day.	Students cannot book it.		
H07	Block a date RANGE, and a window within a day, with a reason.	Both work. The reason is internal and never shown to students.		
H08	Block a period that already contains booked classes.	Shows exactly which classes and which students BEFORE anything happens, and asks you to confirm.		
H09	Confirm that block.	Those classes are cancelled and **every credit goes back automatically**. Check a student's balance.		
H10	Remove that block and choose to put the classes back.	They return, and the credits are charged again.		
H11	**Harder case:** block a day; while blocked, have another student book one of those freed slots; then lift the block.	The original class **stays cancelled** — two classes are never stacked. You are told how many could not be put back, and that student keeps their refunded credit.		

9. Office — students

#	What to do	What should happen	P / F	Notes
I01	Students > Add Student. Fill every field.	Name, User ID, temporary password, phone, country, timezone, fee type, amount.		
I02	Use a User ID that already exists.	“That User ID is already taken.” No half-created account.		
I03	Use a password under 6 characters.	Refused with a clear reason.		
I04	Use the timezone search on this form.	Same searchable picker as Settings, all zones available.		
I05	Set Attendance on the new-student form.	**New:** offers Follow their classes (default), Regular, Irregular.		
I06	Create the student with Irregular set, then open their profile.	Shows Irregular with a pin, even though they have no classes yet.		
I07	Create a student with the default and open their profile.	No tag yet — it starts following their attendance once there are classes to count.		
I08	Sign in as the new student with the temporary password.	Works. They can then edit their own name, phone, photo and gender.		
I09	Edit a student: change fee type, amount, country, timezone and How they book.	All save. Changing country changes their limit and validity — re-check their Buy screen.		
I10	Tick “Add credits without recording a payment” on one student.	Saves. Admin-only, and used in test J below.		

#	What to do	What should happen	P / F	Notes
I11	Deactivate a student with upcoming classes.	Paused, removed from the active list, and **their credits are returned**.		
I12	Try to sign in as that paused student.	The paused notice. They cannot book.		
I13	Reactivate them.	Back to normal.		
I14	Delete a test student.	Asks to confirm first. **Note:** their Firebase login is not removed automatically — delete it in the Firebase console if it matters.		
I15	As Guruji, look for Add Student.	Not available — he gets Add Admin instead. Deliberate: onboarding is the office's job.		

10. Office — credits and money

#	What to do	What should happen	P / F	Notes
J01	Open a student's profile and tap Add credits.	Asks how many, within that student's own limit.		
J02	Leave the amount at 0 and try to add.	**Refused.** Credits are classes already paid for, so the amount is required.		
J03	Do the same for the student you ticked the exception on (test I10).	Allowed with no amount. That flag is the only way.		
J04	Enter an amount and continue.	A confirmation box shows who and how many before anything happens.		
J05	Confirm, then check the student and the Fees page.	Credits added, a confirmed payment recorded, and the student is notified.		
J06	Add credits that would exceed the student's limit.	Refused, naming the real limit (3 or 12, matching that student).		
J07	Use Extend on a batch: by days, by months, and to a chosen date.	All three work.		
J08	Extend a batch that has already expired, with classes left in it.	Revives it. This is how you honour a student who could not use them in time.		
J09	Use Take back on a grant made by mistake.	Unused credits removed; the record is kept.		
J10	Have a student cancel their own class, then look at credit reviews.	The credit is **held, not refunded**, and appears for you to decide: give it back, or keep it spent.		
J11	Choose “give it back” on one and “keep it spent” on another.	Balances change correctly and the flag clears in both cases.		
J12	Fees > Mark Paid for a student.	Records a confirmed payment.		
J13	Edit a recorded amount.	Saves, and the student is notified that the amount changed.		
J14	Open a receipt where one exists.	Shows. Students can never read receipts.		

11. Office and Guruji — the Fees page

Money is counted by the date it ARRIVED. This is the part that changed most recently.

#	What to do	What should happen	P / F	Notes
K01	Open Fees on the current month.	Three figures: Received, Classes done, and To confirm — the last only if unconfirmed money actually exists.		
K02	**The case that matters:** record a payment today while a DIFFERENT month is selected in the strip.	It counts in **today's** month, not the selected one. Money belongs to the month it arrived.		
K03	Record one payment covering several months.	The whole amount shows in the month it was paid — not split across the months it covers.		
K04	Tap a second month in the strip so two are selected.	Both highlight, and the totals cover both together. Tap again to deselect.		
K05	Try to deselect every month.	At least one always stays selected — an empty selection would look broken.		
K06	Check Classes done against the Classes page for that month.	Matches completed classes. Missed ones are counted separately and noted below the figures.		
K07	Look anywhere on the page for “Still due”, “Unpaid” or “Outstanding”.	**There are none.** On credits a student pays before booking, so nobody can be in arrears.		
K08	Expand “Per student”.	Biggest payers first, then anything unconfirmed, then students who simply did not buy this period — shown as a dash, not as a debt.		
K09	Tap Report, pick one month, download the PDF.	Opens. Sections: Received (with the dates paid), and students with no payment. No “to collect”.		
K10	Pick several months, or use Last 3 months, and download again.	Totals cover the whole range. Amounts read “Rs.” and are not blank boxes.		
K11	Open Fees as GURUJI.	Same figures and the same Report. **No Mark Paid.**		

12. Rules that must hold — try to break these

If any of these can be done, stop and report it before going live.

#	What to do	What should happen	P / F	Notes
X01	Get two classes into the same slot by any route you can think of: two students at once, staff scheduling over a booking, a recurring series, or a reschedule onto a taken time.	**Impossible.** Every route refuses, for students and staff alike.		
X02	Hold more unused classes than the limit (3 India, 12 abroad).	Impossible, by buying or by the office granting.		
X03	Book a class without a credit being spent.	Impossible for a credit student.		
X04	As a student, find anywhere showing another student's name against a class, their notes, their recording, their photo, their payments or their fee.	**None of it is reachable.** The calendar shows only that a time is busy.		
X05	As a student, find your own regular / irregular tag anywhere in the app.	Not shown. (Known limitation: it is readable in the browser's developer tools — ask if that matters to you.)		

#	What to do	What should happen	P / F	Notes
X06	As a student, find any way to record or confirm a payment.	None.		
X07	Let a credit expire, then try to book with it.	Refused.		
X08	Pay for classes when already at the limit.	The money is recorded and held, you and the student are both told, and nothing is silently kept or lost.		

13. Across the whole app

#	What to do	What should happen	P / F	Notes
Z01	Add the app to the home screen on Android, then on iPhone.	Installs and opens full screen with its own icon.		
Z02	With it installed, receive a class reminder.	Arrives at the chosen lead time and opens the right screen when tapped.		
Z03	Turn off the network, then move around the app.	Already-loaded screens still show. It does not crash to a blank page.		
Z04	Deploy an update while the app is open.	Picks up the new version without needing a reinstall.		
Z05	Walk every screen in Dark, then again in Light.	Nothing unreadable, including hovers, disabled buttons and the credit card.		
Z06	Walk every screen on a phone-width window.	No horizontal scrolling, no text cut off, no button out of reach.		
Z07	Check long names and large amounts.	A long student name is not chopped mid-word on a profile; a five-figure total still fits its column.		

Known and deliberate, so they are not bugs: Guruji has no money actions; students never see the regular / irregular tag; a student's own cancellation holds the credit for a decision rather than refunding it; and the amount a student types when buying is not checked against anything — the monthly Fees page is where an underpayment would show.
